Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

```
Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of Stains of Salmonella. Bscheritchia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant AgfA, CsgA and AgfA-homologue finbrin subunits, respectively; (2) directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into back into the chromosome of the hamologous species, replacing the native
                                                                                                                                                                     Salmonella; agfA; chromosomal gene replacement; fimbrin; epitope;
                                                                                                                                      AgfA::PT3#1 amino acid sequence SEQ ID NO:12.

```
copy of that gene, and (4) eliciting an immune response in an animal, compy of that gene, and (4) eliciting an immune acid polymer comprising a recombinant Agfa protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coll or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant Agfa protein which is useful for the expression of recombinant Agfa protein which is useful for system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response immunogens, which may be important for directing an immune response in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA ceguence which encodes a foreign epicope or antigen. Also described are: (1) use of thin aggregative finbried (SPEP1/TAP) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Entertabacteriaceae for the production of fimbriae comprising recombinant of Entertabacteriaceae for the production of fimbriae comprising recombinant of directing recombination of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant of the comprising separating an amino acid polymer comprising a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments or segments of sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expensive the heterologous antigens are presented in high numbers (up to system the heterologous antigens are presented in high numbers of the vaccine, the carrier fimbrial submit proteins are usually strong immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial submit proteins are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention recombinated in present are easy and

cc assembly system of strains of Salmonella Escherichia coli and assembly system of strains of Salmonella Escherichia coli and cassembly system of strains of Salmonella Escherichia coli and assembly system of strains of Salmonella Escherichia coli and CC Enterobacteriaceae for the production of fimbriae compisiing recombinant on C directing recombination of a recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant man animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino containing a replacement of segment or segments or diluter. (I) is contained an immune response in an animal. In a fimbrial presentation system the hererologous antigens are presented in high numbers (up to copies/cell), the hybrid fimbrian protein possesses both the carrier fimbrial submit protein sare usually strong immunogensity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial submit proteins are usually strong immunogensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbried (SET)/TAP? nucleation depended assembly system of strains of Salmonella. Escherichia coli and streates for the production of fimbried compisiang recombinant CC Enterobacterizace for the production of fimbried compisiang recombinant CC directing recombination of a recombinant gene into the chromosome of the composous species; (3) directing recombination of a recombinant gene copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the main colliciting an immune response in an animal. In a fimbrial presentation eliciting an immune response in an animal. In a fimbrial presentation containing acernal segment for an efficient live immunogenicity and adhesion properties relevant for an efficient live immunogenes, which may be immortant for directing an immune response in an animal are usually strong immunogenes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MKLLKVAAFAAIVVSGSALAGVVPQWGGGGNHNGGGNSSGPDSTLSIYQYGSANAALALQ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA
                                                                                                                                                                                                            The present sequence represents agfA encoded by the full agfA gene derived from Salmonella enteritidis 2765-3b. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probacteria of the nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from greater than 99% of Salmonella acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative finbries (SEPI)/TAP) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of fimbriae comprising recombinant of a recombinant gene into the chromosome of the chromosome of the chromosome of the composition of a recombinant gene into the chromosome of the homologous species, (3) directing recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal. Comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation containing are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbriae ne usually strong immunogens, which may be important for an efficient live the animal process and adhesion properties relevant for an efficient live the animal process and adhesion properties relevant for an efficient live the animal process and adhesion properties relevant for an employed immunogens, which may be important for directing an immune response adjants the innerted epitope, and hybrid fimbride are easy and immunostation the animal process and an invention of the animal process are easy and the animal process and adhesion process and animal a
                                                                                                                                                                                                                                                                   Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       against the inserted epitope, and hybrid fime inexpensive to purify in large amount. AgfA::PT3#4 amino acid sequence SEQ ID NO:18.

```
The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative finbriae (SEP1/7PAP) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterioraceae for the production of fimbriae comprising recombinant of directing recombination of a recombinant gene chorologous species; (3) directing recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an amino acid polymer comprising a recombinant and animal, comprising separating an amino acid polymer comprising a replacement segment or segments of foreign animo acid polymer comprising a replacement segment or segments of foreign amino acid polymer comprising a replacement segment or segments of foreign amino acid polymer of sequence or sequences grown on a Salmonella, B. coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or dilutent. (I) is useful for the expression of recombinant AgfA protein which is useful for useful for the expense in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 100,000 copies/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial submit proteins are usually strong immunogens, which may be important for directing an immunogens, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 SDARKSETTITQSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

The present invention describes a recombinant agfA gene (1) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment which encodes a foreign epitope or antigen. Also described are:

(1) use of thin aggregative fimbriae (SEP1/7AR) nucleation depended assembly system of strains of Salmonella. Escherichia coli and Enterobacteriaceae for the production of fimbriae comprision grecombinant of a recombinant gene into the chromosome of the homologous species, respectively; (2) directing recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or acid sequence or sequences grown on a Salmonella, E. coli or containing a nation acid polymer for the animal in conjunction with a carrier or dilutent. (I) is useful for the expression of recombinant AgfA protein which is useful for eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin protein gare usually strong immunogenicity and adhesion properties relevant for an efficient live is against the inserted epitope, and hybrid fimbrine are easy and incerting an immune response and intering an immune response and intering an immune response in an animal. The contains are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and adhesion properties relevant contains and intering an immune response and hybrid fimbriae are easy and adhesion properties relevant contains and and an administration in the contains and any and adhesion properties electring an immune response are effected an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                       Salmonella, agfA; chromosomal gene replacement; fimbrin; epitope;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           78.4%; Score 611; DB 3; Length 151; 80.8%; Pred. The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA segment with the morodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative finbriae (SERI) mucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterior accambination of finbriae comprising recombinant of a recombinant gene into the chromosome of the homologous species, replacing the native comprising separating an emino acid polymer response in an animal, protein containing a replacing an immune response in an animal, protein containing a replacement segment or segments of foreign amino acid polymer into the animal in conjunction with a carrier or diluent. (I) is call sequence or sequences grown on a Salmonella, E. Coli or Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful for useful for the expression of recombinant. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copies/cell), the hybrid fimbrin proteins protein possesses both the immunogens, which may be important for directing an immune response confine, the carrier fimbrial subunit proteins are easy and inexpensive to purify in large amount. The present sequence is given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.

                                                                                                                                                                                                                                                                                                                                  엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (I) use of thin aggregative finbriae (SEFI)/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of imbriae comprising recombinant AgfA, CsgA and AgfA-homologue finbrin subunits, respectively; (2) directing recombination of a recombinant gene back into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, portein contraining a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coli or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are:
                                                                                                                                                                                                                                                                                                                                          무
Enterobacteriaceae host cell, from the host cell and introducing the polymer into the animal in conjunction with a carrier or diluent. (I) useful for the expression of recombinant AgfA protein which is useful eliciting an immune response in an animal. In a fimbrial presentation system the heterologous antigens are presented in high numbers (up to 500,000 copiess/cell), the hybrid fimbrin protein possesses both the immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong immunogens, which may be important for directing an immune response against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention

cc assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and assembly system of strains of Salmonella, Escherichia coli and comparable case for the production of fimbriae comprising recombinant.

Agfa, CsgA and Agfa-homologue fimbrin subunits, respectively, (2) directing recombination of a recombination of a recombinant gene into the chromosome of the homologues species, replacing the native comprising separating an amino acid polymer comprising separating an amino acid polymer comprising separating an amino acid polymer comprising a replacement sequent or sequence or sequences grown on a Salmonella, E. coli or comprising an amino acid sequence or sequences grown on a Salmonella, E. coli or contenting a replacement sequent or sequence or sequences grown on a Salmonella, E. coli or contenting an immune response in an animal. In a fimbrial presentation collotting an immune response in an animal. In a fimbrial presentation system the heterologues antigens are presented in high numbers (up to colotes/cell), the hybrid fimbrin protein sequence is given in mannogens, which may be important for directing an immune response contents in the inserted epitope, and hybrid fimbriae are easy and given in contents in the inserted epitope, and hybrid fimbriae are easy and contents in the expensive to purify in large amount. The present sequence is given in

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA segment of the gene has been replaced by a segment of a foreign DNA concerning the encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbrise (SETIJ/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coll and concerning recombinate comprising recombinant comprising recombinant gene of the composition of a recombinant gene into the chromosome of the homologous species; (3) directing recombinant gene into the chromosome of the homologous species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, comprising separating a namino acid polymer comprising a replacement segment or segments of foreign amino containing a replacement segment or segments of foreign amino acid sequence or sequences grown on a Salmonella, E. coll or acid sequence or sequences grown on a Salmonella, E. coll or containing an immune response in an animal in conjunction with a carrier or diluent. (I) is useful for the expression of recombinant AgfA protein which is useful conjunction with a carrier or diluent. (I) is useful for the expression of recombinant for an efficient live vaccine, the carrier fimbrial submit protein sequence is given in against the inserted epitope, and hybrid fimbriae are easy and inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                    Recombinant agfA gene having a segment replaced by a foreign DNA sequence which encodes foreign epitope or antigen, expresses recombinant AgfA protein useful for eliciting immune response in animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 SDARKSETTITOSGYGNGADVGQGADNSTIELTQNGFRNNATIDQWNAKNSDITVGQYGG 120

```

```
The present sequence represents an agfA fragment encoded by an agfA gene fragment derived from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 93% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-MAR-2003 to correct PF field.)
Example 2; Fig 7; 85pp; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 13. Application US/09477135A
| Sequence 13. Application US/09477135A
| Patent No. 652865
| GENERAL INFORMATION:
| APPLICAMT: Nano, Francis
| TITLE OF INVENTION: Mycobacterium Tuberculosis DNA Sequences Encoding
| TITLE OF INVENTION: immunostimulatory Peptides
| PRIOR FILING DATE: 1996-06-14
| PRIOR FILING DATE: 1996-06-15
| NUMBER OF SEQ ID NOS: 169
| SOFTHARE: FatentIn Ver: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           266 IGLTGSGLLGF-----GGLNSGTGN-----IGLFNSGTGNVGIGNSGTGNWQIGNSG 312

NyAlternate names: csgA protein; major curlin protein
C;Species: Escherichia coli
C;Species: Bacherichia coli
C;Accession: S70788; G64846; S31202; S34560; S34559

probable PPE protein - Mycobacterium tuberculosis (strain H37RV)
C;Species: Mycobacterium tuberculosis
C;Accession: A70762
R;Cole, S.T.; Brosch, R.; Parkhill, J.; Garnier, T.; Churcher, C.; Harris, D.; Gordon, S;Connor, R.; Davies, R.; Devlin, K.; Feltwell, T.; Gentles, S.; Hanlin, N.; Holroyd, S Rajandream, M.A.; Rogers, J.; Rutter, S.; Seeger, K.; Skelton, S.; Squares, S.
Nature 393, 537-544, 1998
A;Authors: Sqares, R.; Sulston, J.E.; Taylor, K.; Whitehead, S.; Barrell, B.G.
A;Title: Deciphering the biology of Mycobacterium tuberculosis from the complete genome A;Reference number: A70762
A;Accession: A70762
A;Status: preliminary; nucleic acid sequence not shown; translation not shown
A;Residues: 1-678 <COL>
A;Cross-references: GB:Z74020; GB:AL123456; NID:g3261584; PIDN:CAA98335.1; PID:e1300075
